THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Darleen Stockley on March 28, 2008.

In the claims:

In claim 1, line 8, delete "detecting" and replace with – to detect –

In claim 1, line 9, delete "storing" and replace with – to store –

In claim 12, line 10, delete "detecting" and replace with – to detect –

In claim 12, line 11, delete "storing" and replace with – to store –

Cancel claims 15-35.

Allowable Subject Matter

1. Claims 1-7, 9-14, 36, 38, and 40 are allowed.
2. As to claims 1, 12, and 38, Segal discloses:

a RGB color signal generator to detect a maximum value of each of the RGB color signals, to compare the maximum values, and to detect a color signal having a higher maximum value than the other color signals of the RGB color signals (col. 4, lines 41-60; colors are adjusted based on the greatest maximum value if one exists);

and a system controller to provide a predetermined critical value, the predetermined value, and data on conditions for detecting a color signal having the higher maximum value than the other color signals to the RGB color signal generator (col. 2, lines 60-67; the invention acts as a controller, supplying all max values and thus, conditions for detecting the highest max value, also providing the critical value to a ratio setting unit), wherein the RGB color signal generator to increase or decrease a brightness level of an image displayed on the screen by one of a plurality of predetermined ratios is based on the comparison result (col. 4, lines 29-65; the RGB signals are decreased by a ratio, predetermined by the max value divided by the max allowable value; this would be at least partially based on the max value detected, which is the result of the comparison above).

Kimura discloses a color temperature correction apparatus that works when a luminance is high and a color saturation is below a predetermined threshold (col. 2, lines 59-65). In other words, the invention changes the color temperature for white areas and close-to-white areas. Based on this determination of luminance and

saturation, the invention of Kimura then increases one component in comparison to others, raising the color temperature to some desired level (col. 1, lines 43-58).

Segal discloses a method wherein generating the RGB signals generates RGB color signals having decreased brightness by decreasing the brightness level of the image by one of the plurality of the predetermined ratios if a value is greater than a first predetermined critical value (col. 2, lines 17-24; col. 3, lines 43-60; col. 4, lines 54-60; brightness is reduced by a determined scaling factor and a ratio is a part of this calculation). However, this is not based on a "total maximum value" as in the claims; rather it is an individual RGB value that is used in Segal. Neither Segal nor Kimura teaches this limitation and no other prior art can be combined with these references to teach the limitation in full.

3. The following is an examiner's statement of reasons for allowance:
4. As to independent claims 1, 12, and 38, the prior art does not teach an RGB color signal generator wherein the RGB color signal generator generates RGB color signals having decreased brightness by decreasing the brightness level of the image by one of the plurality of the predetermined ratios if the total maximum value is greater than a first predetermined critical value, determined in a case wherein a brightness level of pixels in an area of the screen from which the total maximum value is detected corresponds to full white along with the other limitations of claims 1, 12, and 38.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2628

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
